First, interfacing is explained using the 8086/8088 with some of the more common peripheral components. After explaining the basics, a more advanced emphasis is placed on the 80186/80188, 80386, 80486, and Pentium through Pentium 4 microprocessors. Intel 80286 The Intel 80188
microprocessor was a
variant of the Intel 80186 .
The 80188 had an 8-bit
external data bus instead of
the 16-bit bus of the 80186;
this made it less expensive
to connect to peripherals .
